## PROJECTS

### PROJECTS/ TRAINING & EMBEDDED PROJECTS

#### ❖ “LSB IMAGE STEGANOGRAPHY”

**Description:** LSB Image Steganography is a software application that is used to hide the data in an image by using some techniques to encrypt the data. Whatever data is present in that file is encrypted into the image. We can get the data from that image by decryption.

#### ❖ “ADDRESS BOOK”

**Description:** The Address Book project is a software application designed to manage and store information related to Customers in any booking situation. This type of project typically involves the implementation of a basic database system or file handling to store and retrieve customer details.

#### ❖ “INVERTED SEARCH”

**Description:** An inverted index is an index data structure, that stores a mapping from content. Such as words or numbers to their locations in a database file, a document, or a set of documents. An inverted index allows fast, full-text searches at the cost of increased processing when a document is added to the database.

#### ❖ “MINI SHELL”

**Description:** This project is a software application that is a minimal version of the bash shell. The goal was to create a simplified shell that could read and execute commands, handle redirection and piping, manage job control, and implement signal handling similar to bash.

#### ❖ “APC CALCULATOR”

**Description:** An arbitrary-precision calculator (APC) in C language performs calculations on numbers with a precision limited only by the available memory. It's also known as bignum arithmetic, multiple precision arithmetic, or infinite-precision arithmetic.

#### ❖ “FINGERPRINT-BASED SMART DOOR LOCK” | Embedded Systems Developer | 2025

**Description:** Developed a smart door lock system using ESP32/STM32 with fingerprint authentication, integrating an LCD display for real-time status, buzzer alerts for unauthorized access, FreeRTOS-based task scheduling for efficient system management, and IoT notifications for remote monitoring and control.
